BRU Producer's Edition 2.0.1 to 2.1.0 Upgrade Guide

Rev: 071210.02

The upgrade process from BRU PE 2.0.1 to 2.1.0 is actually a very simply process. Follow the steps below and if you have any questions at any time, please contact TOLIS Group Technical Support.

1. Download the BRU PE 2.1.0 DMG file from the ProductionBackup.com website.
2. Make sure any currently running instances of BRU PE have been closed.
3. Double click on the BRU_PE_Rel_2.1.0.dmg file. A drive icon will appear on your Desktop.
4. Double click on the BRU PE installation application inside of the DMG that has now been opened.
5. Perform the installation process.
6. Eject the DMG.

Your upgrade to BRU PE 2.1.0 is almost complete. BRU PE 2.1.0 installs into a folder called "BRU UB" that resides inside of the Applications folder. Any short cuts you may have, such as the icon in the Dock, will need to be updated to point to the new BRU PE application located at: /Applications/BRU UB/.

The old BRU PE application, BRU PE 2.0.1 that resides in the Applications folder, may be removed/deleted without any ill effects to the new BRU PE 2.1.0.

The new BRU PE 2.1.0 application is now installed and ready to use!

Technical Support

If you need technical support for your upgrade process, please have your product serial number ready and contact TOLIS Group Technical Support at:
